PRE-SUIT RESEARCH

CERA's pre-suit research includes a thorough review of the medical record, a complete report including a chronological review of events, treatment rendered, and discussion of standard of care issues.

EXPERT WITNESS SERVICES

CERA provides experts in every medical specialty. All experts are board certified and actively practicing medicine. Call our toll free number for an initial, no obligation consultation, or complete our on-line Expert Witness Locator Form at www.medmal.cerainc.com.

DEPOSITION PREPARATION

CERA can remain involved with cases through the litigation process. When questions arise regarding medical issues, we can provide necessary education to improve understanding of the medicine for

attorneys, thus improving ability to successfully try a case. We can also remain in contact with expert witnesses in order to coordinate and optimize efforts.

LIFE CARE PLANS

CERA's on-staff life care planner has extensive experience in the many areas of rehabilitation medicine. Our plans provide valuable information regarding your clients' current and future needs with associated costs through life expectancy. We can also assist in the production of Day-in-the-Life Videos.

GRAPHIC AND EXHIBIT DESIGN

CERA designs and develops trial exhibits, and provides technology to colorize all diagnostic/radiographic films for trial exhibits. PowerPoint presentations for mediation or trial can also be produced.

ON-LINE RESEARCH

CERA can search extensive databases to find appropriate medial literature whether data is needed to support a specific case or general information is needed to educate the client.

E-RECORD

CERA provides a solution to one of the biggest challenges dealing with medical malpractice — medical records management. E-Record converts large volumes of medical records into a digital file on CD-ROM, effectively managing the overwhelming costs and time associated with keeping records organized. Files on CD-ROM can be duplicated, copied, e-mailed, and when necessary printed in full or in part from most all computers.
